

MONCEF MESSAOUDI

Entry-Level Cybersecurity Analyst | SOC Monitoring & Incident Documentation

Constantine, Algeria | messaoudi.moncef80@gmail.com | +213 561 810 832 | github.com/solaire80 | linkedin.com/in/moncef-messaoudi

PROFILE

Cybersecurity student with two and a half years of hands-on technical training, including a self-built five-lab Security Operations Center covering SIEM deployment, log monitoring, and attack detection. Comfortable reviewing security signals, investigating alerts to root cause, and documenting findings clearly for technical and non-technical audiences. Seeking an entry-level SOC / security analyst role to apply this foundation in a production environment.

SKILLS

- Security monitoring & detection: Wazuh SIEM, Sysmon event monitoring, log analysis, alert triage
- Incident investigation: root-cause analysis, evidence documentation, remediation write-ups
- Identity & access: Active Directory, Kerberos, PKI/X.509, OAuth 2.0/JWT, EAP/802.1X
- Networking & infrastructure: VPN networking, WAN networking, server security integration
- Offensive tooling (for detection engineering): Metasploit, Impacket, Hydra
- Platforms: VirtualBox, Kali Linux, Windows Server, Python

PROJECTS

Home SOC Lab — GitHub Portfolio | Personal Project

2026

- Designed, deployed, and documented five self-built security labs: Wazuh SIEM deployment, Sysmon event monitoring, SMB/RDP attack detection, PsExec lateral movement detection, and brute-force detection with automated Active Response.
- Investigated a real Active Response failure, tracing it to a missing IP field in Windows Event 4625, and documented it as a genuine engineering finding rather than a surface-level pass/fail result — the same triage-to-root-cause process used in day-to-day SOC alert review.
- Produced full technical write-ups, evidence screenshots, and a portfolio site to present findings the way an analyst would document an incident for a team.

Repository: github.com/solaire80/Home-SOC-Lab

EDUCATION

BTS — Senior Technician Certificate in Cybersecurity | ArchiMed Pro

Ongoing, 2.5 yrs completed

- Systèmes et Réseaux Informatiques – Option Cybersécurité (MFEP-issued); combines theoretical coursework with continuous hands-on labs.
- Strongest results: server security integration and VPN networking. Currently reinforcing applied cryptography and WAN networking.
- Coursework: authentication protocols (Kerberos, AD trusts, PKI/X.509, EAP/802.1X, OAuth 2.0/JWT), Windows Server security fundamentals.

EXPERIENCE

Independent Market Work | Self-employed

Ongoing

- Worked independently in the local market to generate personal income, developing self-reliance, time management, and direct customer-facing experience.
